

Portable Conveyors

Standard 240V power and extension leads are used. Conveyor belt travel is reversible & overheat protected.

Conveyors can carry 20T/hour of materials so you can hand load or machine load with a small excavator bucket.

No matter where your job is we have the delivery vehicles or Hiab crane to lift the conveyors into place.

Portable Conveyors

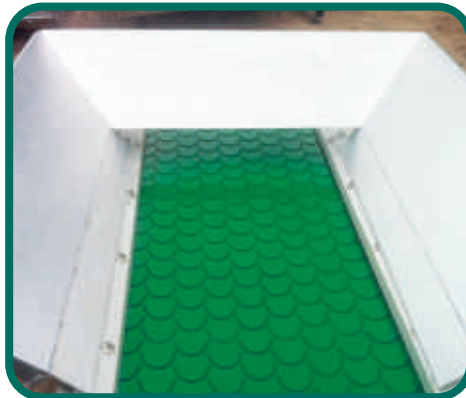

Aussie Lift and Shift have designed conveyor units inhouse using both local and imported product selected to ensure the most robust outcome, they are the most reliable units available in the marketplace.

The units meet applicable plant standards for construction sites and are all fitted with an emergency stop button that immediately stops the conveyor belt when activated.

The conveyors run from a standard 240V outlet, so all you need is an extension lead, or even a generator to start moving your materials from one spot to the next.

Conveyors have carry handles to enable easy transport of the lightweight conveyor

Materials Hoppers available

Our conveyors have cleated belts to assist fine material operations on steep slopes
